

00:00:00,090 --> 00:00:10,360 [speaker_0]

Thank you. Let's see. I think it should work. Perfect. Um, yeah, so should we get going?

00:00:10,740 --> 00:00:12,040 [speaker_1]

Yeah, sounds good.

00:00:12,050 --> 00:00:39,440 [speaker_0]

All right, um, my first question is, when you hear the term audit-ready security report, um, what, for your opinion, must it contain, uh, to accept it as reliable? Or also, what would be a deal breaker for you, um, if it were missing, like, I don't know, the found vulnerabilities, or risk owners, or the investigated modules, or all that kind of stuff?

00:00:42,380 --> 00:00:58,890 [speaker_1]

Interesting. Yeah, there's a lot in there. Um, [exhaling] I think the, the big questions I would have up front are, you know, auditable by, by who? Um-

00:00:58,900 --> 00:00:59,100 [speaker_0]

Mm-hmm.

00:01:00,640 --> 00:01:12,360 [speaker_1]

So, [exhaling] uh, when you say it's audit-ready, um, like, is that for a particular, uh, you know, third-party auditing, um, service or, like, a generic kind of-

00:01:12,380 --> 00:01:12,500 [speaker_0]

Yeah

00:01:12,510 --> 00:01:21,580 [speaker_1]

... something, you know? Does that mean it's, um, in some kind of standardized format or, like, a machine-readable-

00:01:21,590 --> 00:01:21,700 [speaker_0]

Mm-hmm

00:01:21,760 --> 00:01:36,980 [speaker_1]

... um, kind of format, what would that look like? Um, so, uh, on-- that would be my question on that piece. Um, on the, on the audit-ready, like, how, how generalizable versus specific-

00:01:37,080 --> 00:01:37,100 [speaker_0]

Mm-hmm

00:01:37,110 --> 00:01:39,980 [speaker_1]

... to a particular type of, um, auditing-

00:01:40,040 --> 00:01:40,240 [speaker_0]

Yeah

00:01:40,420 --> 00:01:59,900 [speaker_1]

... framework or, uh, or, or governance approach. Um, and then the security report, um, I don't know if there's, like, a specific... Uh, like, I'm not familiar with that term meaning, like, a specific thing.

00:01:59,910 --> 00:01:59,910 [speaker_0]

Mm-hmm.

00:01:59,940 --> 00:02:06,260 [speaker_1]

So I don't know what, I don't know what's normal of, like, a security report. Um-

00:02:06,380 --> 00:02:07,500 [speaker_0]

Yeah.

00:02:07,600 --> 00:02:20,920 [speaker_1]

Uh, so I think, you know, [exhaling] if-- I guess, can I, can I, can I ask, like, does, does that mean a very specific thing in your world that you're-

00:02:20,940 --> 00:02:24,320 [speaker_0]

Mm, not, not necessarily.

00:02:24,360 --> 00:02:24,440 [speaker_1]

Okay.

00:02:24,460 --> 00:03:24,100 [speaker_0]

It's kind of like a lent term. Um, it's basically an audit report basically stating, um, what, what was investigated and what are the, the findings. Um, and yeah, I think you're, you're right, it heavily depends on target group, um, for, for who the report is actually. Uh, I think in my case, it would be, like, a third-party, um, audit, um, or audit- auditing company or whatever. Um, so when the, the software development prog, um, process is investigated, like when using AI, um, gener- generative tools, um, to kind of investigate if, if there is a safe use, um, of, of those tools, um, and, and how the risk, risks are managed, um, when, when using those AI tools.

00:03:24,160 --> 00:03:33,060 [speaker_1]

Yeah. Yeah, I mean, I think, like, the term security report, you know, also, you know, has the potential to mean so many different things, and so-

00:03:33,100 --> 00:03:33,280 [speaker_0]

Mm-hmm

00:03:33,380 --> 00:04:07,460 [speaker_1]

... uh, it would just, you know, be very helpful to, to know up front and, and concretely, you know, here is the world of things that we cover and don't cover. Um, and if this is just, uh, you know, evidence of, you know, actual vulnerabilities that were found in the code versus that plus including, for example, like, threat modeling of things that could go wrong-

00:04:07,520 --> 00:04:07,750 [speaker_0]

Mm-hmm

00:04:07,750 --> 00:04:17,010 [speaker_1]

... under specific circumstances. Um, but what, like, that there's not necessarily, like, this, this is, like, a current problem-

00:04:17,019 --> 00:04:17,149 [speaker_0]

Mm-hmm

00:04:17,149 --> 00:04:33,260 [speaker_1]

... this is a present and, and, um, an already evidenced problem, but, uh, this is something that, you know, could hypothetically go wrong in the future under this scenario. Um, it would be, it would be great to have that piece of it.

00:04:34,640 --> 00:04:44,060 [speaker_0]

Yeah, I mean, um, at the end, or, like, at question seven, um, I have some kind of mock report, um, prepared for you, um-

00:04:44,070 --> 00:04:44,070 [speaker_1]

Okay

00:04:44,070 --> 00:04:47,780 [speaker_0]

... with the placeholders and stuff, where you can take a look at it and-

00:04:47,800 --> 00:04:47,900 [speaker_1]

Cool

00:04:47,920 --> 00:04:50,740 [speaker_0]

... tell me what you think about it. So, um-

00:04:50,760 --> 00:04:51,720 [speaker_1]

Okay, cool.

00:04:51,760 --> 00:04:54,800 [speaker_0]

Maybe this will, will also help. [chuckles]

00:04:54,820 --> 00:04:55,380 [speaker_1]

Yeah.

00:04:55,400 --> 00:04:55,620 [speaker_0]

Um-

00:04:55,630 --> 00:04:57,320 [speaker_1]

Yeah, no, that'll be great to see.

00:04:57,360 --> 00:05:01,880 [speaker_0]

I mean, we could also start with that, um, to make things easier.

00:05:01,920 --> 00:05:02,130 [speaker_1]

Okay.

00:05:02,260 --> 00:05:03,940 [speaker_0]

Um-

00:05:03,980 --> 00:05:04,320 [speaker_1]

Yeah.

00:05:04,760 --> 00:05:22,120 [speaker_0]

Maybe I will post it in the chat. Let me see how that works. Um, why can't I... Maybe I will just share the screen.

00:05:22,140 --> 00:05:26,500 [speaker_1]

Okay.

00:05:37,410 --> 00:05:56,020 [speaker_0]

Where is it? Where is it? Yeah, that would be, um, a mock audit report that I generated. It's not real values, um, for now.

00:05:58,540 --> 00:07:00,170 [speaker_1]

Okay, just reading through that.... Okay, and then it has these, uh, measure and manage. Does it include the other functions as well?

00:07:00,290 --> 00:07:02,970 [speaker_0]

Um, what, what do you mean?

00:07:03,090 --> 00:07:08,970 [speaker_1]

Uh, so in the, in the NIST AI RMF, there's the, uh, map, measure, manage, and govern.

00:07:09,090 --> 00:07:12,070 [speaker_0]

Um, y- let me see.

00:07:13,050 --> 00:07:18,610 [speaker_1]

So just curious if, if you're, like, choosing a s- a subset or if you're also doing map and govern?

00:07:18,730 --> 00:07:32,490 [speaker_0]

Um, yeah. I should have used it, but I don't know where it is now. I think the govern-- is the govern part, like, the recommended actions probably?

00:07:34,370 --> 00:07:46,850 [speaker_1]

Um, I feel like it should be separate. Like, it should be... I, I, my, uh, what I would have expected would be to see a, like, map, map and govern on here in the same way that measure and manage are.

00:07:46,890 --> 00:07:47,080 [speaker_0]

Okay.

00:07:47,150 --> 00:08:12,480 [speaker_1]

Because map is-- And I don't know if, you know, the tool that you're, um, developing could do this, but, uh, map would be doing things like, um... I mean, they're, they're the more, they're the more, like, human-centric, organizational-centric pieces. Uh, so, so maybe it's, maybe it's a stretch, and, um-

00:08:12,480 --> 00:08:12,480 [speaker_0]

Mm-hmm

00:08:12,530 --> 00:08:21,990 [speaker_1]

... it'd be interesting to hear what you think about it. But, um, map is where you're thinking through what's the, what's the context of use, like, what-

00:08:22,070 --> 00:08:22,080 [speaker_0]

Mm-hmm

00:08:22,080 --> 00:08:27,790 [speaker_1]

... what are the types of, uh, threats or hazards that might come up?

00:08:27,810 --> 00:08:28,070 [speaker_0]

Mm-hmm.

00:08:28,170 --> 00:08:37,350 [speaker_1]

Um, thing, things like that, and then govern is sort of setting up the institutional processes to be able to handle it. So-

00:08:37,370 --> 00:08:38,670 [speaker_0]

Mm-hmm.

00:08:38,770 --> 00:08:41,990 [speaker_1]

Um, I don't know what that would look like for, for this.

00:08:42,010 --> 00:08:42,020 [speaker_0]

Yeah.

00:08:42,030 --> 00:08:56,190 [speaker_1]

Maybe there's just not-- maybe they're not relevant, or maybe there's, like, an overarching thing of, like, you know, in general, before implementing this tool-

00:08:57,290 --> 00:08:57,450 [speaker_0]

Yeah

00:08:57,670 --> 00:09:01,810 [speaker_1]

... you need to think through these core elements of map and govern.

00:09:01,830 --> 00:09:02,550 [speaker_0]

Mm-hmm.

00:09:02,570 --> 00:09:07,150 [speaker_1]

And then the tool will help you with the, with the measure and manage.

00:09:07,930 --> 00:09:21,250 [speaker_0]

Yeah, yeah, yeah, I see. Also, maybe the, the recommended actions, they don't fit necessarily for the govern part because they're too technical also, maybe.

00:09:21,350 --> 00:09:26,470 [speaker_1]

Yeah, they're probably... The- they seem more like manage, like part of manage if-

00:09:26,480 --> 00:09:26,480 [speaker_0]

Okay

00:09:26,480 --> 00:09:28,230 [speaker_1]

... 'cause that's sort of like how do you-

00:09:28,250 --> 00:09:29,270 [speaker_0]

Yeah, true.

00:09:29,310 --> 00:09:32,230 [speaker_1]

What are the, like, specific implementations-

00:09:33,250 --> 00:09:33,410 [speaker_0]

Yeah

00:09:33,710 --> 00:09:36,990 [speaker_1]

... uh, like mitigations that you, that you put into place-

00:09:37,170 --> 00:09:37,230 [speaker_0]

Yeah

00:09:38,150 --> 00:09:39,530 [speaker_1]

... uh, to, to help manage the risk.

00:09:39,550 --> 00:09:45,150 [speaker_0]

Yeah, also the next step, um, part is probably also on the manage.

00:09:45,170 --> 00:09:46,510 [speaker_1]

Mm-hmm.

00:09:46,550 --> 00:09:48,550 [speaker_0]

Mm.

00:09:48,630 --> 00:09:49,060 [speaker_1]

I think so.

00:09:50,510 --> 00:10:00,270 [speaker_0]

Yeah. Yeah, um, that's good input. So the map and govern part is kind of missing.

00:10:01,430 --> 00:10:11,490 [speaker_1]

I mean, I think you could have, like, just a little bit more in general, like, um, written out context in this.

00:10:11,500 --> 00:10:11,570 [speaker_0]

Mm-hmm.

00:10:11,590 --> 00:10:15,350 [speaker_1]

If this is, if this is a report that people, you know, are reading.

00:10:15,410 --> 00:10:16,750 [speaker_0]

Yeah.

00:10:18,630 --> 00:10:21,720 [speaker_1]

Uh, uh, so I think you have, like, an executive summary right now-

00:10:21,720 --> 00:10:21,720 [speaker_0]

Mm

00:10:21,720 --> 00:10:29,630 [speaker_1]

... that's just, like, thing, but maybe there, maybe there's, like, a some written part there that explains.

00:10:29,749 --> 00:10:42,170 [speaker_0]

Yeah, yeah, for sure. It's all too number heavy and, and technical for now.

00:10:43,150 --> 00:10:47,770 [speaker_1]

Mm-hmm. Um, but again, it ki- it kind of depends on who the audience is-

00:10:47,870 --> 00:10:48,840 [speaker_0]

For sure. Yeah

00:10:48,840 --> 00:10:51,240 [speaker_1]

... um, whether, like, the degree to which that matters.

00:10:51,270 --> 00:10:51,390 [speaker_0]

Yeah.

00:10:51,970 --> 00:11:08,030 [speaker_1]

Um, but I think if it-- if you're giving this to, like, to a team at a company, it's probably helpful for them to have that, that, like, situating it into the-

00:11:08,050 --> 00:11:08,150 [speaker_0]

Yeah

00:11:08,190 --> 00:11:13,370 [speaker_1]

... broader set of work they're doing, um, like a written out piece, I would imagine.

00:11:13,430 --> 00:11:34,650 [speaker_0]

Mm-hmm. Um, perfect. So we kind of implied also, uh, um, already my, my last question, which was: If you could structure an ideal report, um, which sections, um, would you choose to enable quick decisions?

00:11:37,030 --> 00:11:40,470 [speaker_1]

Yeah, I mean... Let's see. Could you scroll down a little bit more?

00:11:40,490 --> 00:11:41,470 [speaker_0]

Yeah, for sure.

00:11:50,950 --> 00:11:55,220 [speaker_1]

And the, the policies that it's referencing there, uh, are those-

00:11:55,220 --> 00:11:58,870 [speaker_0]

Yeah, that's, um, workplace orders.

00:12:00,850 --> 00:12:02,870 [speaker_1]

Okay, but those would... What would those be?

00:12:03,590 --> 00:12:21,730 [speaker_0]

Um, maybe like company, um, policies, so specific policies from, from the company, um-... where, where those reports are generated, kind of.

00:12:24,130 --> 00:13:04,660 [speaker_1]

Okay. Um, yeah, I guess in general, like, if there's ways to add in more information about these pieces, like, [sighs] you know, the threat, it just says injection, but, like-

00:13:04,690 --> 00:13:04,859 [speaker_0]

Mm-hmm.

00:13:04,859 --> 00:13:09,190 [speaker_1]

-what does that, what does that mean? Like, what, what's the specifics of, like, what's happening there?

00:13:09,250 --> 00:13:09,770 [speaker_0]

Okay.

00:13:09,870 --> 00:13:28,930 [speaker_1]

Um, the-- and then, like, under, you know, un- under measure with these, um, tools and, and rules here, like, I, I wouldn't know what to do with that.

00:13:29,030 --> 00:13:30,990 [speaker_0]

Yeah, I see. Mm-hmm.

00:13:31,000 --> 00:13:33,120 [speaker_1]

Um, like, what i- what does that tell me about-

00:13:34,650 --> 00:13:34,730 [speaker_0]

Yeah

00:13:34,750 --> 00:13:36,350 [speaker_1]

... about what's happening?

00:13:36,360 --> 00:13:36,360 [speaker_0]

Yeah.

00:13:36,390 --> 00:13:40,030 [speaker_1]

So is there a way to per- like, just put in more, more detail?

00:13:40,050 --> 00:13:41,410 [speaker_0]

Mm-hmm.

00:13:41,550 --> 00:13:46,430 [speaker_1]

Um, like, how is it measuring? Like-

00:13:46,450 --> 00:13:47,730 [speaker_0]

Mm-hmm.

00:13:51,710 --> 00:14:10,880 [speaker_1]

'Cause this, this is where you would be doing, um... You would wanna, like, reference, um, different, you know, evaluations or, uh, like, measuring this against something else. Or like, like, I just, I don't know how-

00:14:10,970 --> 00:14:10,980 [speaker_0]

Mm-hmm

00:14:10,980 --> 00:14:14,690 [speaker_1]

... to compare this to what I, what I'm used to thinking of measure meaning.

00:14:14,750 --> 00:14:27,850 [speaker_0]

Yeah. Yeah, I, I think the-

00:14:27,870 --> 00:14:28,139 [speaker_1]

Mm-hmm

00:14:28,270 --> 00:14:38,390 [speaker_0]

... the govern part is also kind of missing. Like, as we said, that is mostly under manage, probably.

00:14:40,610 --> 00:14:55,020 [speaker_1]

Yeah, there's probably-- you could probably add in govern with, um, you know, what... Like, what would you have to have set up in advance at the organizational level to have prevented this from happening?

00:14:55,030 --> 00:14:55,930 [speaker_0]

Mm-hmm.

00:14:55,950 --> 00:14:57,910 [speaker_1]

May- maybe that's, maybe there's maybe nothing, but-

00:14:57,990 --> 00:15:00,610 [speaker_0]

Yeah, yeah, yeah.

00:15:01,530 --> 00:15:06,450 [speaker_1]

Or to be, like, monitoring, like, how it evolves in the future or something.

00:15:06,490 --> 00:15:08,990 [speaker_0]

Mm-hmm. Yeah.

00:15:10,770 --> 00:15:15,380 [speaker_1]

Um, but I think, but in general, I, I, I really like the recommended actions and next steps-

00:15:15,430 --> 00:15:15,590 [speaker_0]

Okay

00:15:15,730 --> 00:15:29,450 [speaker_1]

... and that it's, you know, like, action-oriented and, um, that it provides, like, specific, um, pieces. You could hypothetically have recommended actions across all of the, the functions-

00:15:29,490 --> 00:15:29,670 [speaker_0]

Mm-hmm

00:15:29,910 --> 00:15:34,430 [speaker_1]

... of, of map, measure, um, manage, and govern at a-

00:15:34,470 --> 00:15:34,810 [speaker_0]

Yeah.

00:15:34,850 --> 00:15:42,710 [speaker_1]

You could, you could think about that, whether that makes sense or not. Um, uh, could you scroll down a little bit?

00:15:42,770 --> 00:15:46,070 [speaker_0]

Yeah, sure.

00:15:47,290 --> 00:15:49,290 [speaker_1]

Okay, so then this is, this is a, a new-

00:15:49,350 --> 00:15:51,340 [speaker_0]

Yeah, it's another finding. Yeah.

00:15:51,370 --> 00:15:52,040 [speaker_1]

There's another finding.

00:15:52,170 --> 00:15:53,670 [speaker_0]

This all repeats, so.

00:15:56,030 --> 00:15:57,210 [speaker_1]

Okay.

00:15:57,230 --> 00:16:01,990 [speaker_0]

[clears throat] Okay.

00:16:02,050 --> 00:16:02,570 [speaker_1]

Yeah.

00:16:03,490 --> 00:16:35,370 [speaker_0]

Perfect. Um, let me see what questions are left. Um, what responsibility information do you need to clarify risk ownership? Um, for example, like an owner per system or, uh, um, like a responsibility matrix, or some escalation roles, and all that stuff.

00:16:42,850 --> 00:17:17,920 [speaker_1]

Yeah, I guess, uh, in terms of the recommended actions and next steps, they-- those could be recommended for, you know, a specific, um, specific actor. And then, I don't know, like, how detailed you can be in the report. Like, if in terms of, like, how this is scaled a- across different organizations or something, like-

00:17:17,930 --> 00:17:18,150 [speaker_0]

Mm-hmm

00:17:18,590 --> 00:17:27,630 [speaker_1]

... um, you know, cer- certainly to be most useful within, like, a single organizational context, you would wanna have, like, the individual's name-

00:17:27,640 --> 00:17:27,640 [speaker_0]

Yeah

00:17:27,640 --> 00:17:35,780 [speaker_1]

... um, for, you know, for, for each, for each action going forward, of like, who's gonna own that and be responsible-

00:17:35,790 --> 00:17:35,800 [speaker_0]

Mm-hmm

00:17:35,800 --> 00:17:52,330 [speaker_1]

... for overseeing that. Um, but I don't, like, know if you are gonna know that infor- [chuckles] Like, how would you would know that information in terms of, like, developing the tool?

00:17:52,350 --> 00:17:53,440 [speaker_0]

Yeah. That's, that's the, uh-

00:17:53,450 --> 00:17:54,790 [speaker_1]

Am I misunderstanding now?

00:17:54,800 --> 00:18:10,210 [speaker_0]

[chuckles] No, no, that's the, that's like the, um, difficult part, like knowing who's responsible, um, before generating the report. So, yeah.

00:18:12,310 --> 00:18:14,290 [speaker_1]

Sorry, I hear some crying. Um-

00:18:14,350 --> 00:18:15,490 [speaker_0]

Yeah, no worries, if you have to go.

00:18:15,510 --> 00:18:18,150 [speaker_1]

I might get, I might get interrupted. I don't know if it was a-

00:18:18,230 --> 00:18:18,650 [speaker_0]

Yeah, yeah

00:18:18,890 --> 00:18:18,920 [speaker_1]

... big-

00:18:18,950 --> 00:18:19,350 [speaker_0]

No worries

00:18:20,070 --> 00:18:22,490 [speaker_1]

- a big fall or if it's fine.

00:18:23,298 --> 00:18:30,478 [speaker_0]

... [chuckles] Yeah, if you, if you have to, to check, yeah, no worries.

00:18:30,678 --> 00:18:32,358 [speaker_1]

Um, here, let me... I'll, I'll be right back.

00:18:32,398 --> 00:18:33,838 [speaker_0]

Yeah, yeah, for sure. No worries.

00:18:33,858 --> 00:19:46,488 [speaker_1]

Sorry. Sorry about that. The, uh-

00:19:46,558 --> 00:19:46,678 [speaker_0]

No worries.

00:19:46,698 --> 00:19:49,378 [speaker_1]

Um, little one fell off her bike and hit her head-

00:19:49,418 --> 00:19:49,518 [speaker_0]

Oh

00:19:49,538 --> 00:19:50,418 [speaker_1]

... on the door.

00:19:50,478 --> 00:19:54,378 [speaker_0]

Oh, no. [chuckles] I hope everything's all right.

00:19:55,408 --> 00:19:58,158 [speaker_1]

[sighs] Yeah, I think so. I think so. Okay.

00:19:58,298 --> 00:20:18,238 [speaker_0]

Um, yeah, maybe just o- um, two short last questions. Um, how should, um, a report make its limitations or uncertainties transparent without losing trust? Like, um, stating its known blind spots or tool limitations or false positives.

00:20:18,418 --> 00:20:19,298 [speaker_1]

Mm-hmm.

00:20:19,308 --> 00:20:22,118 [speaker_0]

Um, how would you do that?

00:20:23,118 --> 00:20:33,957 [speaker_1]

Yeah, I, I think, I think it's really important to put those up front, and, uh, you know, w- would increase trust, you know, long term to-

00:20:34,028 --> 00:20:34,318 [speaker_0]

Mm-hmm

00:20:34,378 --> 00:20:51,078 [speaker_1]

... um, to be as transparent about that as possible. Uh, and so it... I think it should, you know, it should be part of any, like, overview, uh, of, of the tool, um, and part of any communication-

00:20:51,258 --> 00:20:51,267 [speaker_0]

Mm-hmm

00:20:51,267 --> 00:20:55,218 [speaker_1]

... that is with, with somebody that was gonna be integrating it.

00:20:55,238 --> 00:21:18,478 [speaker_0]

Mm-hmm. All right, um, and the last question: How would you use, um, the provenance of the code, like human-generated or AI-generated, um, in these reports? Or if, if at all, also, would you use it at all, or what requirements do you have for the rela- reliability of this information?

00:21:20,558 --> 00:21:30,778 [speaker_1]

Yeah, would that, would that be based on, on some kind of, like, metadata or that's, like, selected by-

00:21:30,798 --> 00:21:46,498 [speaker_0]

That's, that's the, the, the problem, kind of a problem right now, because in, in my current tool, um, the developers have to be upfront and, and state, um, if the, the code is generated by themselves or by AI. Um-

00:21:46,508 --> 00:21:46,638 [speaker_1]

Mm-hmm

00:21:46,878 --> 00:22:21,418 [speaker_0]

... and that's kind of the weak point, because they can basically just lie and say it's human-generated when, in fact, it's AI-generated. So there, that's where, where the question comes from, if you would use the provenance, um, in the report at all. Um, and if, if I'm using it, like stating, yeah, it's AI-generated, what requirements would be good to have, um, to have reliable, um, or to be more reliable, uh, of the source, um...?

00:22:23,978 --> 00:22:33,198 [speaker_1]

Um, well, first, I think, I think you should include an option of, like, partially AI-generated.

00:22:33,218 --> 00:22:33,878 [speaker_0]

Mm-hmm. Okay.

00:22:34,138 --> 00:22:36,318 [speaker_1]

Not just, not just the binary of, like-

00:22:36,358 --> 00:22:36,728 [speaker_0]

Yeah, true

00:22:36,728 --> 00:22:39,318 [speaker_1]

... it was or it wasn't, because I think a lot of-

00:22:39,378 --> 00:22:39,518 [speaker_0]

Yeah

00:22:40,078 --> 00:22:42,358 [speaker_1]

... a lot of cases right now, people are, like-

00:22:42,378 --> 00:22:43,117 [speaker_0]

True

00:22:43,127 --> 00:22:45,117 [speaker_1]

... you know, having some, [chuckles] some input, but-

00:22:45,158 --> 00:22:46,068 [speaker_0]

Yeah, yeah, yeah. [chuckles]

00:22:46,068 --> 00:22:49,878 [speaker_1]

And, and wouldn't necessarily wanna say it was fully AI-generated, but, um-

00:22:49,978 --> 00:22:50,118 [speaker_0]

Right

00:22:50,998 --> 00:22:56,668 [speaker_1]

... but, uh, but, you know, probably a lot of instances now are at least partially [chuckles] -

00:22:56,678 --> 00:22:57,078 [speaker_0]

Yeah, yeah

00:22:57,098 --> 00:22:57,768 [speaker_1]

... AI-generated.

00:22:57,898 --> 00:22:58,778 [speaker_0]

100%.

00:22:58,848 --> 00:23:16,278 [speaker_1]

So I would encourage that. Um, and then, [sighs] yeah, I don't, um, I don't know what's feasible to el- and, and-

00:23:16,288 --> 00:23:16,288 [speaker_0]

Yeah

00:23:16,288 --> 00:23:29,318 [speaker_1]

... you know, what else you could do feasibly in terms of the, the provenance. I'm sure there are tools that, uh, attempt to do this. Um, but they might-- I don't know how reliable those would be anyway.

00:23:29,378 --> 00:23:32,518 [speaker_0]

Mm-hmm.

00:23:32,658 --> 00:23:56,598 [speaker_1]

Um, yeah, I mean, presumably, like, if, if the main value add of this, um, audit report is designed to support, um, the, the security of AI-generated code, then people are gonna be, you know, interested in using it when, when they're, you know, partially or fully gen-

00:23:56,758 --> 00:23:56,768 [speaker_0]

Mm-hmm

00:23:56,768 --> 00:24:04,658 [speaker_1]

... using AI to generate the code. So, um, you could have a baseline assumption that, like, in most cases, that's what's happening, and so-

00:24:04,678 --> 00:24:04,898 [speaker_0]

Mm-hmm

00:24:04,998 --> 00:24:18,088 [speaker_1]

... the, um, you know, carrying out the, the review and security checks, that, uh, would be top of mind for those instances and prioritizing that.

00:24:18,098 --> 00:24:27,298 [speaker_0]

Mm-hmm. Perfect. Um, I think we managed to get all of the questions, actually.

00:24:27,358 --> 00:24:28,098 [speaker_1]

Okay, great.

00:24:28,578 --> 00:24:28,678 [speaker_0]

Perfect.

00:24:28,818 --> 00:24:31,958 [speaker_1]

Well, um, congrats on the work, Sebastian, and I'm so glad-

00:24:31,978 --> 00:24:32,148 [speaker_0]

Thank you

00:24:32,158 --> 00:24:33,338 [speaker_1]

... that you're here, and, um-

00:24:33,358 --> 00:24:33,878 [speaker_0]

Yeah, thank you

00:24:33,918 --> 00:24:36,898 [speaker_1]

... moving this forward. I hope you have a great, a great visit.

00:24:37,198 --> 00:24:43,197 [speaker_0]

Thank you. Yeah, also, all the best for, for your new job and all the moving. [chuckles]

00:24:43,778 --> 00:24:44,518 [speaker_1]

Thank you.

00:24:44,538 --> 00:24:44,718 [speaker_0]

Yeah.

00:24:44,728 --> 00:24:47,498 [speaker_1]

Yep, I'm sorry, sorry to not be there, uh, with you-

00:24:47,558 --> 00:24:47,988 [speaker_0]

Yeah, no worries

00:24:47,988 --> 00:24:53,518 [speaker_1]

... in Berkeley. Um, but, but yeah, I'm glad that there's, uh, lots of good folks around who can-

00:24:53,538 --> 00:24:53,548 [speaker_0]

Yeah

00:24:53,548 --> 00:24:58,158 [speaker_1]

... you know, uh, lot- lots of people you can learn from and meet with. So, um, yeah-

00:24:58,168 --> 00:24:58,168 [speaker_0]

Mm-hmm

00:24:58,168 --> 00:25:00,948 [speaker_1]

... let me know if there's anything else I can do to help, but, um-

00:25:00,978 --> 00:25:01,278 [speaker_0]

Thank you

00:25:01,298 --> 00:25:09,538 [speaker_1]

... uh, uh, um, you've, you've also- you're connected with, with Nada now and, and all the people-

00:25:09,578 --> 00:25:09,608 [speaker_0]

Yeah

00:25:09,678 --> 00:25:10,578 [speaker_1]

... there, right? So-

00:25:10,588 --> 00:25:13,578 [speaker_0]

And I, I also have Crystal, um, for, for my interview-

00:25:13,598 --> 00:25:13,608 [speaker_1]

Great

00:25:13,608 --> 00:25:15,858 [speaker_0]

... and also Leonie, where you connected us both.

00:25:16,118 --> 00:25:16,248 [speaker_1]

Yeah.

00:25:16,248 --> 00:25:19,178 [speaker_0]

Um, she also, uh, wants to participate, so that's great.

00:25:19,238 --> 00:25:19,508 [speaker_1]

Oh, good.

00:25:19,618 --> 00:25:21,418 [speaker_0]

Um, yeah.

00:25:21,458 --> 00:25:22,018 [speaker_1]

Very good.

00:25:22,028 --> 00:25:23,318 [speaker_0]

So everything's on track. [chuckles]

00:25:23,328 --> 00:25:25,388 [speaker_1]

All right. Okay, well, take care, Sebastian.

00:25:25,398 --> 00:25:27,378 [speaker_0]

Perfect. Thank you. You too.

00:25:27,388 --> 00:25:27,388 [speaker_1]

See you later.

00:25:27,398 --> 00:25:30,598 [speaker_0]

Bye.

00:25:30,608 --> 00:25:31,538 [speaker_1]

Okay. Bye.
